

Less paperwork. More learning.

Badge-based Attendance that works Seamlessly with your Learning Management System (LMS)

RollCall helps your instructors in the classroom or on the shop floor capture training attendance by scanning ID badges and automatically updating these records in SuccessFactors Learning.

EASY ATTENDANCE SCANNING THAT IS INTEGRATED WITH YOUR LMS

Collecting in-person attendance is now a simple and automated instructor activity. No more manual spreadsheets, hardcopy rosters, or manual, error-prone coordination involving multiple administrators. RollCall provides both mobile and web-based interfaces for capturing and recording attendance in your organization's LMS.

HOW DOES IT WORK?

RollCall allows instructors and learning administrators to select scheduled or unscheduled courses via RollCall's mobile app for attendance collection.

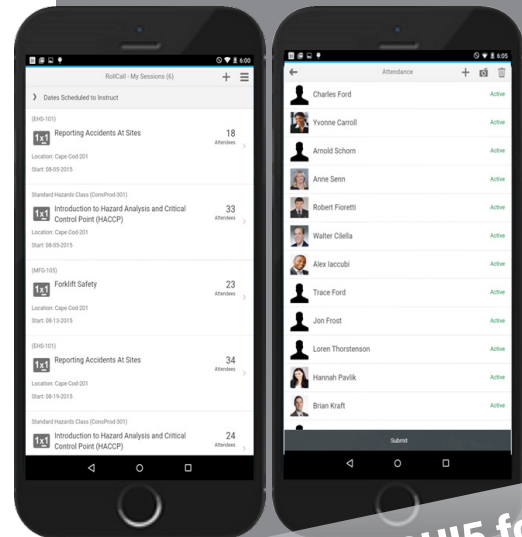

The RollCall app scans identification badges to capture attendance coupled with real-time validation of learner data.

Once instruction is complete, RollCall's LMS integration allows instructors to verify attendance and update learning history for each participant.

RollCall supports open attendance, roster-based attendance, and e-signature scenarios.

Multi-LMS, Multi-Scanner environment?

RollCall is designed to support the collection of scanning uniformly for organizations that may have not yet consolidated on a single LMS.

Built with SAPUI5 for the best user experience!
